EDUCATION

University of California, San Diego

Bachelor of Science in Data Science, Minor in Business Analytics | GPA: 3.82 / 4.0

San Diego, CA

Expected June 2028

EXPERIENCE

National Security Innovation Intern

Innovating for National Security (i4NS)

San Diego, CA

Sept. 2026 – Dec. 2026

- Scoping data-driven approaches to address navigation and inertial system drift for Extra Large Unmanned Undersea Vehicles (XLUUVs) during long-duration submerged transit.
- Collaborating with a 5-person research team to translate an ambiguous technical problem into analytical requirements, constraints, and potential solution approaches.

Projects Mentor

Data Science Student Society (DS3)

San Diego, CA

Aug. 2026 – Present

- Mentoring student project teams within a 600+ member organization on end-to-end data product development and cloud deployment (GCP, AWS).
- Providing technical reviews on analytical methodology, data cleaning pipelines, exploratory data analysis, and model implementation.

Data Science Intern

Center for Community Energy (CCE)

San Diego, CA

Feb. 2026 – June 2026

- Built a PostgreSQL database identifying 900+ commercial solar prospects across San Diego County in partnership with the Move Now renewable energy team.
- Engineered a SQL ETL pipeline using CTEs, JOINS, CASE WHEN, and UNION ALL to clean, integrate, and standardize inconsistent datasets for prospect analysis.
- Applied LEFT JOIN logic to identify organizations missing from existing prospect lists and surface additional outreach opportunities.

PROJECTS

SurfCast SD — Surf Forecast & ML Rating Predictor | *Python, Scikit-learn, GCP*

May – June 2026

- Built a live ML forecasting system predicting 7-tier surf-quality ratings across three San Diego breaks using 303,000+ hourly ocean observations spanning three years.
- Benchmarked and tuned five classifiers with RandomizedSearchCV, selecting a Random Forest with 0.541 macro F1 on data with 47% class imbalance.
- Automated live predictions with GCS and Cloud Run and used time-series EDA to identify daily wind cycles as a key predictive signal.

Snowball Effect Analysis in Professional LoL | *Python, Pandas, Scikit-learn, Plotly* | [Live Site](#)

Mar. 2026

- Evaluated whether early-game advantages predict outcomes across 9,236 professional matches, applying permutation testing that produced $p < 0.001$.
- Built a Random Forest classifier on 15-minute game states achieving 73.6% test accuracy, a 23.6 percentage-point improvement over the 50% baseline.
- Analyzed missingness and potential bias and published an interactive report communicating EDA, statistical testing, model evaluation, and findings.

TubeScope — Viral Trend Predictor | *Python, Pandas, Scikit-learn, Plotly* | *3rd Place, DS3 Showcase*

Oct. – Dec. 2025

- Identified an 83% viral-trend drop-off rate using Kaplan-Meier survival analysis; implemented a Random Forest model that achieved 68% recall and a $3\times$ precision lift.
- Engineered features from YouTube Data API metadata to build an automated data pipeline powering live dashboard analytics.
- Placed 3rd out of 10 competing teams at the DS3 Showcase for technical execution and presentation.

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services, Aug. 2026

TECHNICAL SKILLS

Languages: Python, SQL

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly

Statistics/ML: Hypothesis Testing, A/B Testing, Permutation Testing, Survival Analysis, Time-Series Analysis, EDA, Feature Engineering, Model Evaluation, Hyperparameter Optimization

Cloud/Data: GCP (Cloud Run, GCS), AWS (S3, EC2, Lambda), PostgreSQL, ETL Pipelines

Tools: Claude Code, Tableau, Excel, Git, Jupyter, VS Code
