EDUCATION

University of California, San Diego

Bachelor of Science in Data Science, Minor in Business Analytics | GPA: 3.82 / 4.0

San Diego, CA

Expected June 2028

EXPERIENCE

National Security Innovation Intern

Innovating for National Security (i4NS)

San Diego, CA

Sept. 2026 – Dec. 2026

- Conducting recurring interviews with problem sponsors and subject matter experts to uncover user needs, test assumptions, and refine an ambiguous technical problem.
- Collaborating with a 5-person team to translate stakeholder feedback and technical research into clearer analytical requirements, constraints, and solution priorities.

Projects Mentor

Data Science Student Society (DS3)

San Diego, CA

Aug. 2026 – Present

- Supporting student project teams with problem scoping, data analysis, project planning, and technical decision-making across end-to-end data projects.
- Providing feedback on analytical methodology, data cleaning, exploratory analysis, model evaluation, and communication of results.

Data Science Intern

Center for Community Energy (CCE)

San Diego, CA

Feb. 2026 – June 2026

- Built a PostgreSQL database identifying 900+ commercial solar prospects across San Diego County by integrating and analyzing multiple inconsistent datasets.
- Engineered a SQL ETL pipeline using CTEs, JOINS, CASE WHEN, and UNION ALL to clean, standardize, and validate source data for prospect analysis.
- Applied LEFT JOIN logic to identify missing organizations, investigate gaps in existing prospect lists, and surface additional outreach opportunities.

PROJECTS

SurfCast SD — Surf Forecast & ML Rating Predictor | *Python, Scikit-learn, GCP*

May – June 2026

- Built a live ML forecasting system predicting 7-tier surf-quality ratings across three San Diego breaks using 303,000+ hourly ocean observations spanning three years.
- Benchmarked and tuned five classifiers with RandomizedSearchCV, selecting a Random Forest with 0.541 macro F1 on data with 47% class imbalance.
- Automated live predictions with GCS and Cloud Run and used time-series EDA to identify daily wind cycles as a key predictive signal.

Snowball Effect Analysis in Professional LoL | *Python, Pandas, Scikit-learn, Plotly*

Mar. 2026

- Analyzed player and match behavior across 9,236 professional League of Legends matches to quantify how early-game advantages influence outcomes.
- Applied permutation testing and predictive modeling, producing $p < 0.001$ and a Random Forest model with 73.6% test accuracy.
- Evaluated missingness and potential bias and published an interactive report communicating EDA, statistical testing, model evaluation, and findings.

TubeScope — Viral Trend Predictor | *Python, Pandas, Scikit-learn, Plotly* | *3rd Place, DS3 Showcase*

Oct. – Dec. 2025

- Integrated the YouTube Data API to analyze metadata and audience behavior, identifying an 83% viral-trend drop-off rate using Kaplan-Meier survival analysis.
- Built and evaluated a Random Forest classifier achieving 68% recall and a $3\times$ precision lift for identifying viral-trending videos.
- Engineered features and an automated data pipeline powering live dashboard analytics; placed 3rd out of 10 teams at the DS3 Showcase.

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services, Aug. 2026

TECHNICAL SKILLS

Languages: Python, SQL

Analytics: Statistical Analysis, Hypothesis Testing, A/B Testing, Permutation Testing, Behavioral Analysis, EDA, Data Visualization

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly

Data/Cloud: PostgreSQL, ETL Pipelines, Data Cleaning, Data Validation, GCP (Cloud Run, GCS), AWS (S3, EC2, Lambda)

Tools: Tableau, Excel, Git, Jupyter, VS Code
